All the Tools, One Source

Professional Shareware Libraries are comprehensive collections of all known Public Domain, Free, Shareware* and commercial vendor patch/bugfix/add-on products supporting PC professionals in many specialty areas. Each library helps you get **ALL** available tools as quickly and economically as possible. Products are available on CD-ROM and 1.44MB diskettes.

Indexed Directories Save You Time

Huge libraries of tools can be extremely helpful to you, but without organization their massive size makes ***finding*** the product you need a lot of work. You find tools for specific needs ***FAST*** with these CDs because each library's database directory lets you search for a product by type, name, vendor or with a free text search across product descriptions. Each library's directory lists the product, release date, size, producer, address, telephone numbers (including 800, Fax, BBS, EMail, etc.), price, product type, and description. You can rapidly browse documentation and source code files for each ZIP file on-line. Many directories list other information, such as all known commercial products for a specialty (for "one stop shopping"), distributors, BBSs, and user groups. All directories are in simple dBASE III+ DBF format for easy import into other applications.

Guaranteed to Make You More Productive

The directories let you easily and rapidly locate products that let you work more efficiently, produce better applications, increase profits, and keep from "reinventing the wheel". Our specialists for each library spend thousands of hours collecting files and checking information. Frequent contactwith authors, reviews of journal advertising, and frequent access to on-line services (Internet, AOL, CompuServe and many BBSs) make our directories and libraries the most extensive and accurate PC products of their type available at any price. Your time is valuable, and our products are ***GUARANTEED*** to save you their purchase price. In fact, **all EMS products come with a 30 day, unconditional, money back guarantee.** If you don't find them the most valuable tools you have **ever** purchased, just send them back for a prompt refund.

New BBS Support!

We now offer exceptional support for all types of BBSes, including direct database access, free standard and custom file listing services, free BBS file collection cleanup, BBS comarketing and more. We also offer full TBBS and PC Board support, included prepared listings and PPE/PPS programs for searching our databases on-line.

***Shareware products are not free. They require payments directly to the author if you continue using them after evaluation. Fees listed here only cover EMS's assembly and distribution costs.**

The EMS Difference: No Shovelware - Just Tools to Make You More Productive

These libraries should not be confused with out-of-date "Shovelware" CD-ROM "dumps" of a regional BBS or Internet host offered by other vendors. EMS products are aggressively assembled by professionals in each area who understand your field and are dedicated to producing a collection that is truly useful to you. They are optimally compressed and stored using PKZIP to minimize storage requirements and checked for all known viruses using three leading antiviral products. Because they contain **ONLY** products related to your area of interest, and because they generally contain **ALL known** products in that category, you won't have to waste valuable time searching through multiple, incomplete catalogs and collections of programs of limited interest to the PC professional. The Alternative Software Bulletin said **"this is definitely a great deal"**. In addition to the libraries described here, we have other libraries planned, including PowerBuilder. Call for status.

20 Specialty Areas Covered

Access Utility Library has support products for Microsoft's Access Database. Winner of VBPJ's "Reader's Choice" 1995 award for Access addons. Types of products include accounting, applications, barcode, benchmarking, buttons, clock, communication, database design, forms, graphics, import/export, information, macros/modules, network, OLE/DDE, printing, program utility, programming, queries, reference, reports, security, setup, SQL server/ODBC, tables, tutorial and others.

ASM Utility Library has products for both the novice and professional assembler programmer. Types include array, assembler, benchmarking, BIOS, code, comm, compiler, compression, date/time, debugger, demo, diagnostic, disassembler, disk I/O, DOS, DOS extender, driver, editor, environment, format, graphics, hardware, interrupt, keyboard, language interface, library, lookup, math, memory, menu, mouse, ms windows, multitask, network, oop, OS/2, patch, print, protected mode, reference, screen, security, shell, sort, sound, strings, toolkit, translator, TSR, tutorial, utility, video, XASM, and others.

C/C++ Utility Library contains file collections mostly for Microsoft and Borland compilers. The most common types of products included are arrays, benchmark, binary tree, bit manipulation, all the C++ categories listed below, code, communication, compiler, compression, configuration, DOS, database, date/time, debugger, disk management, driver, editor, file, games, graphics, help, I/O, interrupt, keyboard, library, linked list, MS Windows, make, mathematics, memory management, mouse, multitask, network, patch, printer, program generator, programming help, reference, screen, security, sort, sound, string, TSR, text processing, translation, tutorial, user interface, virus, and others. C/C++ Users Journal (Feb'95) called it "comprehensive collection" for "one stop shopping". PC World's Tom Swan (May'91) called it ***"a mountain of C***

code", said he was ***"impressed with this one's quality"***, and that ***"the EMS library is a bargain hunter's dream"***.

CAD Utility Library contains products for serious users of AutoCAD and related products plus a directory of commercial AutoCAD products. Among the types included are files for 3-D Autolisp, animator movie, architect, block, demo, drawing, fun, hatch, info, menu, newsletter, slide, text font, utility, AutoFlix, movie, civil, dimension, electrical, electronic, file management, layer, mechanical, on-line service, and programming utilities.

Clarion Utility Library is a collection of the latest programs for Clarion developers, including batch file, CDD Library, conversion, data file, DOS, information, instructional, LEM, patches, programs with source, source code, source utilities, template utilities, templates, com., templates, custom, and 3rd party demos.

Clipper and **FoxPro Utility Libraries** are file collections (many with source) with every known development utility and code fragment for Xbase language programmers. Each library has over 80 major types of file collections, including application generators, array management tools, ASM tools, Clipper function and class libraries, dBASE clones, debuggers, documentors, interface programs for letting other languages use Xbase files (and vice versa), data compression, code compression, memo management tools, graphics programs, report generators, printer control programs, programs to make your applications run faster, programs to convert foreign format files to/from Xbase, Xbase specific editors, mail merge utilities, programs to run Xbase applications on non-PC hardware, and MS-Windows support. The directory databases include all these and 1100 commercial tools for XBase language developers. Computer Language Magazine said ***"quite possibly the most useful tool for heavy developers of dBASE and Clipper applications... Anyone who works in dBASE, Fox, or Clipper should have a copy of the directory."*** When they reviewed the March 1989 version of the library, they concluded, ***"any programmer who doesn't want to reinvent the wheel should get the library. This may be the most productive $100 you'll ever spend."*** Since then, they have grown to ten times that size and improved even more.

DOS Utility Library contains the most useful utilities for PC consultants, technical support personnel, and PC power users. Many of these programs are too small or obscure to be commercially marketed, yet are invaluable in helping PC professionals solve the real world problems they often encounter. Among the types of products included are backup, batch enhancer, clock, command line editor, compression, copy/move, debug interface, diagnostic/setup, directory path, disk analyzer, disk cataloger, display, DOS replacement, DOS shell, execution timer, file comparison, file compression, search, file splitter, viewer, global execution, keyboard, keystroke buffer, laptop, memory expansion, menu, path, pop-up help, printer, prompts, RAM disk, reboot, remote operation, screen blanker, security, sort program, task switcher, text editor, text search, translate/emulate, TSR management, unprotect program, virus detection/eradication, and Windows support.

Delphi Utility Library has all know products specifically for Borland's new Delphi programming tool. It includes products for BDE, Btrieve, bug fix, business mgmt, code generator, communication, compiler, custom controls, data compression, database, date/time, decode, desktop, diagnostic, disk, file, games, graphics, help, input/edit, install, interface, math, network, reference, report generator, resource, search, text, toolkit, translation, user interface, winsock,and others.

NT Utility Library has essential tools for Windows NT power users, consultants and troubleshooters. Included are app. launchers, archivers, clocks & calendars, command line tools, command prompts, compilers, cursors, technical documents, fonts, graphics, hardware improvers, network drivers, other drivers, patches, programming tools, registry, security, source code, startup, tcp/ip clients, tcp/ip servers, text tools, text editors, video drivers, winhelp files, and more.

NW Utility library is specifically for Novell Netware LAN consultants and systems administrators. LAN Times called it ***"sweet deal for a sweet price", "a bargain at twice the price"***, and went on to say ***"programs themselves represent just about every conceivable kind of utility for Netware", "you are assured of getting the latest and greatest of shareware offerings." "enough of a Netware fix to last a long time".*** Some of the many types of files included are 3270, Apple, AS400, auditing, backup, batch, BBS, bindery, boot, Btrieve, bug fixes, capture, CD-ROM, chat, client, communication, Compaq, compsurf, database, diagnostic, distr. processing, documentation, DOS, driver, fax servers, file console, file transfer, games, groupware, hard disks server, help, IMSP, install, IP, lanalyzer, LAT communications, login/logout, mail, management, map, memory, menu, messaging, mirror, multimedia, NACS, Netview support, appware, NetWare connect, Mac, hostprint, hub, LAN wgrp, NetWare Lantern, NetWare link serv., mgmt svcs, MHS, mobile, MPR, name svcs., navigator, NFS 1.2, NLM-4.x, ODI, SAA, simulation, SQL, telephony, training, workplace, network schedule, news display, NIC drivers, NLM, Novell DOS 7, NLM SDK, SFT, NSM, NWLite, OS/2, Personal Netware, power management, print, program schedulers, programming, remote, security, server time, shell, supervisor, syscon, system mgmt-win, system passwords, system reporting, task servers, trustee, tutor, tuxedo system, Unix, usage, user management, virus, VLM, VMS, vrepair, wide area network, Windows, Windows NT and many other types.

OS/2 Utility Library gives software developers the essential PD/Shareware utilities and files left out of the current release of OS/2 2.x. PC Techniques, July'93 called it ***"well worth having"***. Types of products include archive, backup, BBS programs, command line, communications, configuration, database, directory, diskette utility, DOS maintenance, drivers, editors, educational, file viewer, games, graphics utility, icons, information, multi-media, network utilities, OS/2 BMP, OS/2 maintenance, patches, printer, productivity tools, programmer's utils, security, shell editor, shell enhancer, time scheduler, and others.

Pdx Utility Library contains file collections specifically for Paradox DOS and Windows programmers. It contains applications, browse, bug fix, clones, communication, compiler, configuration, data compression, data dictionary, data entry, date, debugger, dialog box, directory, documentor, duplicate, editor, editor support, export/import, forms, graphics, hardware info., help, index, library, math, memo fields, menu, mouse, network, PAL extension, PXengine, printer control, report, SQL, screen control, search, security, setkey, soundex, spell check, string function, structure, tabulation, text editing, tutorial, user inter-

face, validation, workspace, zipcode, and other types of programs.

Pascal Utility Library has the latest (only 5.0 or later) Turbo and other (mostly Borland) Pascal programs. Included are file collections for array, ASM/inline, bit manipulation, BTrieve, bug fix, code, comm, compiler, data compression, database, date/time, debug, diagnostic, DOS, driver, encrypt, error, file, games, graphics, help, hypertext, input/edit, install, interface, interrupt, keyboard, link, linked list, math, memory mgmt, multitask, network, OOP, overlay, Paradox, patch, printer, reference, ROM/BIOS, screen, search, sound, stat/finance, toolkit, TPWindows products for array, bug fix, comm, date/time, desktop, diagnostic, font, games, graphics, install, math, memory mgmt, multimedia, multitask, network, Paradox, printer, reference, streams, text, translation, TSR, Turbo Vision, tutor, user interface, video, virus, window, and other types of products. UK based Pascal Magazine (July'94) called it "***comprehensive...a bargain***".The Cobb Group's Inside Turbo Pascal journal (December'91) said "***at this price and for the convenience of the electronic directory, with just a single file you can probably justify the price of the entire library.***"

Science/Engineering Library has a selection of programs for students and professional scientists and engineers. Included are agricultural sciences, astronomy, audio, automation, ballistics, broadcast engineering, cad, calculator, chemistry, civil/structural, construction, converter, curve fitting, electronics, equations, estimator, geometry, hydraulics, industrial, life sciences, mapping, mechanical, meteorology, PCB design, physics, software engineering, statistics, thermal, trigonometry, tutorial, and scientific wordproc/graphics.

Spreadsheet Utility Library contains file collections for serious users of Lotus 1-2-3, Quattro, and Excel. It includes accounting, add-in, auditor/annotator, automotive, billing/estimating, bookkeeping, business planning, calendar, communication, compiler, data entry, database, display enhancement, file, finance, forms management, games/sports, goal seeking, graphics, legal, macro generator, macro library, mathematics, mouse, print enhancement, project management, real estate, reference, search & replace, security, speedup, clones, statisical, tax, teacher tools, training, translation, Windows interface, and word processor utilities.

VBDOS/PDS/QBasic Library holds files selected for the serious Visual Basic/DOS, Quick Basic and PDS programmer. Included are code utility, file access, language extension, communication library, general library, math library, windows library, graphics library, library manager, text, and other types of products for professional Basic programmers.

VBASIC Library contains file collections specifically for Visual BASIC programmers. The library won the Visual Basic Programmer's Journal 1994 ***Readers' Choice Award*** for programming tools and utilities and is the 5th best selling VB tool in VBxtras catalog. This library contains a wide variety of applications and utilities, many with source code. It also includes a Windows based database directory of all files in the library and many additional commercial VBasic utilities and add-ons. These include: business, buttons, calculator, calendar, clock, communications, custom control, data access, database, DDE, desktop, device control, disk utility, DLLs for communication, database, graphics, network, sound, telephone, and interface, educational, entertainment, envelopes, file compression, file finder, file management, finance, fonts, form, game, graphics, help, icon utility, input routines, inspiration, language extension, listbox, mail, menu, pen windows, printer, productivity, prog. sound, sys. util., program control, program utility, programming, reference, run time library, science, security, sound, spellcheck, system utility, text, timer, and many others.

The **WINUtil** collection contains Windows utilities (many with source code) for consultants, power users, and programmers. PC Computing (July'92 Best Bets) said ***"Windows shareware aficionados rejoice...just about everything you ever imagined in Windows".*** PC Techniques magazine said ***"certainly the largest collection of Windows miscellany currently in circulation...well worth the price"***.PC World (May'92) called them***"an amazingly complete collection of Windows shareware that will keep you happily playing for days - and productive a lot longer."*** It includes backup, benchmarking, BMP utilities, bug fixes, cardfile, clipboard, clock, configuration, database, desktop, diagnostic, disk manager, display, driver, DT publishing, file compression, font utility, graphics, icon utilities, keyboard, macro, memory management, network, print, program management, security, sound, and many other types of programs.

PC Products "Yellow Pages"

PC Product Database is a "Yellow Pages" for the PC industry which lists all 69,000 known products for IBM compatible PCs and 24,000 U.S. and international firms which produce them, with address, voice, Fax, over 2700 E-Mail addresses, 1300 BBS, and over 6800 toll free (800) numbers, products produced, type of product, and short descriptions. It's up-to-date, flexible, and much faster than a phone book, so that PC analysts and vendors can quickly find addresses and toll-free numbers for even obscure companies and software and hardware products, by type and even with free text search. The CD-ROM version also has the entire database in what are probably the world's largest Windows Help format files. **Planning a press release?** All PC oriented magazines are included in the database, as are all types of PC products, including system & expansion hardware, peripherals, accessories, books, tapes, Windows, OS/2, and other OS software products. If you market to the PC industry, the database lists **24,000 addresses of potential customers**. You can target hardware, software, shareware, etc. companies by the type of product the company produces. Because the database is in industry standard dBASE III+ format, it is easy to make extracts for your firm's needs. It's updated monthly, so your directory will always be much more complete and accurate than any printed directory. It includes large numbers of companies the print directories don't include, such as foreign and shareware producers. EMS spends thousands of hours collecting and checking the information in the current database to make it the most complete directory available at any price. But we didn't just make it the **best** directory, we also made it the **most affordable,** with site license included.
