THE KERMIT COMMUNICATION SOFTWARE CATALOG

Kermit is the low-cost, high-quality alternative to expensive commercial communication software. Kermit software incorporates Columbia University's error-correcting Kermit protocol for transferring text and binary files between computers of all sizes. It is well documented and in wide use; it is available for about 400 different computers and operating systems, written in a wide variety of programming languages. Source code is available for all versions.

Kermit software works over direct or dialed serial connections, and often over local and wide area networks too. For file transfer to take place, a Kermit program runs on *each* end of the connection, one on each computer. The most popular Kermit software programs are described below. The complete collection is listed on pages 2–3.

MS-DOS Kermit 3.13

MS-DOS Kermit **3.13** runs on the entire **IBM PC** and **PS/2** families and compatibles under **MS-DOS** versions 2.0 through 6.0, directly under DOS or in Microsoft **Windows**. MS-DOS Kermit is packaged on diskette with the book *Using MS-DOS Kermit* by Christine M. Gianone, Digital Press (1992).

MS-DOS Kermit's terminal emulations include DEC VT320 and VT220 (international models), VT102, VT100, VT52, Data General DASHER D463 and D470, Heath/Zenith-19, plus Tektronix 4014 and Sixel graphics. Terminal emulation features include screen rollback, capture, copy, and print; 132-column mode; horizontal scrolling; key mapping and macros; comprehensive character-set support; a compose key for entering accented letters; color text and graphics; much more.

File transfer features include long packets, sliding windows, dynamic packet length, locking shifts, control-character "unprefixing," and international character-set conversion for Western and Eastern European languages, Cyrillic, Hebrew, and Japanese. **Automation features** include command macros, command files, and a powerful, easy-to-use script programming language.

Serial connections are supported for COM1–COM4 at speeds up to at least 57,600 bps; RTS/CTS hardware flow control is available for use with high-speed modems. Automatic modem dialing scripts are included for Hayes, Telebit, US Robotics, Practical Peripherals, and other modems, and there is an easy-to-use dialing directory. **Network support** includes TCP/IP (built-in, with up to *six concurrent sessions*), AT&T StarLAN / StarGROUP, DEC PATHWORKS, IBM NETBIOS, IBM LANACS, Novell NASI/NACS, Novell LWP TELAPI, 3COM BAPI, Beame & Whiteside TCP/IP, Intel OpenNET, Ungermann Bass Net/One, Interconnections TES, as well as BIOS Interrupt 14 support for externally-established network connections. TCP/IP connections require a *packet driver* (Ethernet or SLIP class) or an *ODI driver*, and can coexist with Novell IPX connections.

C-Kermit 5A

C-Kermit 5A(189) is the Kermit software for **UNIX**, **VAX/VMS**, **OpenVMS VAX** and **AXP**, IBM **OS/2**, Data General **AOS/VS**, Microware **OS-9**, Apollo **Aegis**, the Commodore **Amiga**, and the **Atari ST**. C-Kermit supports all the same advanced Kermit file transfer capabilities as MS-DOS Kermit 3.13. Communications features include key mapping and keystroke macros, automatic dialing, a dialing directory, terminal connection (the OS/2 version also includes built-in VT102 emulation), TCP/IP and other network support in the UNIX, VMS, OS/2, and AOS/VS versions, a powerful script programming language, and international character-set conversion for both file transfer and terminal connection. C-Kermit software comes with the book *Using C-Kermit* by Frank da Cruz and Christine M. Gianone, Digital Press (1993), a step-by-step introduction and a comprehensive reference.

IBM Mainframe Kermit 4.2

IBM mainframe Kermit Version 4.2 for **VM/CMS**, **MVS/TSO**, **CICS**, and **MUSIC** supports advanced Kermit protocol features including long packets and international character sets, and it works with a wide variety of communication processors in linemode and protocol converters in 3270 fullscreen mode. The program is distributed in IBM 370 assembly language source-code form with complete online instructions for building and using.

The Kermit Protocol Specification

The Kermit protocol specification, complete with C-language programming examples, is given in the book *Kermit, A File Transfer Protocol* by Frank da Cruz, Digital Press (1987), which also includes an overview of what Kermit is for and how it works, with tutorials in computer file systems and data communications.

KERMIT DISTRIBUTION MEDIA

Kermit software is distributed by Columbia University on magnetic tape, tape cartridges, and certain diskette formats. Tapes and cartridges include all source code and supporting files in machine-readable form for each Kermit implementation, and in some cases also binaries (encoded in hex or other printable format). Diskettes have no source code except when noted on the order form.

Kermit software programs are collected on six reel-to-reel 9-track tapes: A, B, C, D, E, and F. The programs are assigned to tapes A–F as shown in the second column of the Kermit version list as follows: Tape A has the MS-DOS, CP/M-80, and Apple II versions. Tape B has the IBM mainframe and DEC PDP-11 versions. Tape F has C-Kermit. Tape C has other miscellaneous microcomputer, PC, and workstation versions. Tape D has other miscellaneous minicomputer and mainframe versions. Tape E contains machine-readable copies of the Kermit protocol manual, various other manuals, articles, the Info-Kermit Digest, newsletters, a character-set-aware text-to-PostScript printing utility, and tape utilities. Tapes and cartridges are available in these formats:

ANSI: ANSI labeled ASCII, format D (variable length records), blocksize 8192. 9-track, half-inch, reel-to-reel, 1600 bpi. Readable by many computer systems, including VAX/VMS.

TAR: UNIX TAR format, blocksize 10240, 9-track, 1600 bpi.

OS: IBM OS standard labeled EBCDIC, format VB (variable length records), blocksize 8192, 9-track, 1600 bpi, for MVS, CMS, and other mainframe systems. IBM VM/CMS users should order the OS format and use one of the included tape-reading programs to read the tape on a CMS system; printed instructions are included with the OS tape.

TK50: TK50 tape cartridge for the DEC MicroVAX or VAXstation. VMS BACKUP format. Also readable by TZ30, TK70, and compatible drives.

QIC: UNIX TAR-format quarter-inch tape cartridge. Readable on Sun computers, IBM RS/6000, SCO systems, and other UNIX systems equipped with QIC cartridge drives.

8MM: EXABYTE 8-millimeter cassette, UNIX TAR format.

Diskettes formats are 5.25-inch 360K and 3.5-inch 720K.

NEWS AND UPDATES

Our newsletter, *Kermit News*, is mailed periodically free of charge to all our Kermit customers to bring news of Kermit software releases and related developments. Ordering any Kermit material from us automatically adds you to the subscriber list. We do not have the resources to send automatic software updates. Use the order form to obtain new versions of the Kermit software, or call +1 212 854-3703 for inquiries.

TERMS AND CONDITIONS

The Kermit software−including source code−is furnished without warranty of any kind, and neither Columbia University, nor the individual authors or publishers, nor any institution that has contributed Kermit material, acknowledge any liability for any claims arising from the use of Kermit. Since source code is available, users may fix bugs and make improvements, and are encouraged to contribute their work back to Columbia for further distribution.

Kermit software may be ordered by private individuals, corporations, academic or government institutions, and other organizations for their own internal use, but the software may not be resold or otherwise redistributed to external clients, customers, or contractors without written permission of the Manager of Kermit Development and Distribution at Columbia University. Contact us for further information.

TO ORDER FROM COLUMBIA UNIVERSITY, fill out and return the enclosed order form. PREPAYMENT by credit card or check is encouraged; an additional ORDER PROCESSING FEE is required if we must send an invoice. Orders are shipped by delivery service or US mail, normally within 2–4 weeks of receipt, but firm delivery schedules or methods cannot be guaranteed. Prices are in US dollars and include shipping costs. When two prices are shown (like $100 / $135), the first price applies to the USA, Canada, and Mexico and the second price is for shipments to other countries (exception: if you can supply with your Federal Express account number, then pay the first price). Rush service is available for an extra fee. Call +1 212 854-3703 for additional ordering information. Telephone and Fax orders are accepted if payment is by Master Card or Visa. Use the order form for Fax orders, and, for payment by credit card, be sure to include your signature.

(11.00, July 1993) **KERMIT ORDER FORM, SIDE 1** #_____

Prices, terms, and items are subject to change. If this form is dated more than 6 months prior, please contact us for new information. Please order carefully since we CANNOT refund or exchange items. Prices are in US dollars ($), first price for North America / second price for shipping outside North America (unless you pay shipping).
