CONDITIONS FOR COMMERCIAL DISTRIBUTION OF KERMIT SOFTWARE

Kermit Development and Distribution
Columbia University Academic Information Systems
New York, NY, USA

January 1993

Kermit software is not in the public domain. It is copyright by the Trustees of Columbia University in the City of New York. Kermit software is distributed and supported by Columbia University. The Kermit development and distribution effort is self-sustaining, funded by income from mail-order software distribution and by sales of published documentation.

Kermit software may be distributed by commercial enterprises under the conditions enumerated in this document. Commercial distribution includes bundling of Kermit software with hardware or software products; furnishing Kermit software to institutions or corporations under contract; furnishing Kermit software to government or military agencies through a government contract, and similar arrangements.

The conditions are:

1. The supplier must furnish each end-user at the customer site with a copy of the pertinent manual. This helps make the end-users self sufficient, thus reducing the burden on the supplier's (and Columbia University's) help desk. In the case of commercially published manuals (for which quantity discounts are available), this arrangement helps to fund Columbia University's Kermit support and development efforts. "End-user" is defined as the user of a workstation (e.g. a PC with MS-DOS or OS/2, a UNIX or VMS workstation, etc) that is running Kermit software, including users of PCs who run Kermit software from a LAN file server. When Kermit software is installed on a shared minicomputer or mainframe, then the pertinent documentation should be supplied in sufficient quantity for the user population, e.g. a book per department or floor or site, so that each user has ready access to the documentation for the centrally-installed Kermit software.

2. The supplier must not modify the Kermit software source code without consent of Columbia University. If changes are needed, they must be coordinated through Columbia University so they can be supported and carried forward in new releases. The supplier can, of course, produce tailored initialization files, command files, macros, scripts, tip sheets, and similar material that does not involve changes to the Kermit software source code.

3. The supplier must not modify, remove, or obscure any copyright notices that appear in the software or documentation.

4. The supplier acknowledges that the Kermit software and documentation are provided as is; no other warranty is provided, express or implied, including without limitation, any implied warranty of merchantability or implied warranty of fitness for a particular purpose. Neither the supplier nor the end-users shall hold liable the authors of any Kermit software programs, publications or documentation nor Columbia University, Digital Press, nor any other contributing institution or individual for program or documentation errors.

MS-DOS Kermit is the Kermit software for IBM PCs, PS/2s, and compatibles running MS-DOS or Microsoft Windows. The documentation is *Using MS-DOS Kermit*, Second Edition, by Christine M. Gianone, Digital Press, Burlington, MA (1992). German and French language editions are also available.

C-Kermit is the Kermit software for UNIX, VAX/VMS, OpenVMS, OS/2, AOS/VS, OS-9, the Commodore Amiga, and the Atari ST. The documentation is *Using C-Kermit* by Frank da Cruz and Christine M. Gianone, Digital Press, Burlington, MA (1993). German and French editions are in preparation.

Other Kermit versions, for which commercially published documentation is not yet available, may be distributed under the terms listed above. In this case, documentation is furnished online as part of the software distribution and may be accessed online by the supplier and/or the end-user. Should commercially published documentation become available at a later date, the same terms will apply as those that now apply to MS-DOS Kermit and C-Kermit.

To obtain permission to distribute Kermit software to its customers, the supplier should write a letter describing its intentions and agreeing to the terms listed in this document to:

Christine M. Gianone, Manager
Kermit Development and Distribution
Columbia University
612 West 115th Street
New York, NY 10025 USA
Telephone: +1 212 854-5126
Fax: +1 212 662-6442 *or* (212) 663-8202

Use the same address for inquiries regarding ordering information, packaging options, formats, quantity discount schedules, support options, training, custom development, and similar information.
