WebActions
SAMPLE FILES

This zip contains three WebActions Photoshop 4.0 actions in a file named samples.atn. They can be used to stylize text input with the Type Mask tool, as well as selections made with the lasoo, marquee tools, etc.

The three actions enclosed are:

Sample 1   Creates brightly colored speckles from text input with the 'Type Mask' tool, or from a selection.

Sample 2   Creates a multi-colored 'tapestry' effect from text input with the 'Type Mask' tool, or from a selection.

Sample 3   Creates a gold metal effect from text input with the 'Type Mask' tool, or from a selection.

Each of the samples results in an image on a transparent background. Use drag-and-drop to drop them on a background of choice.

The really adventurous can edit the *.atn file to set the 'make' background to a color of their choice. Please note that these actions have only been tested with a transparent background.

INSTALLING AND RUNNING SAMPLES.ATM

Create a new folder under your Photoshop folder as a central place for your WebActions and drop the samples.atn file into it, or into the directory of choice.

Open Photoshop and click on the black arrow icon at the top right-hand side of the actions palette. Select "Load Action", navigate to the WebActions samples.atn file and load it. Make sure the actions palette is set to Button Mode.

Clicking on any of the actions will load a new file, and prompt you to enter text using the Type Mask mode. After entering the desired text, click on the Red Button and the action will complete without further intervention.

The results are on a transparent background, which can be dragged and dropped onto other files as appropriate.

See the next page for contact and ordering details . . . . . .
